

Assignment - 4

Assignment Date	22 October 2022
Student Name	PAARVATHI S
Student Roll Number	311019106046

Write code and connection in Wowki for ultrasonic sensor.

Whenever distance is less than 100 cm send “Alert” to IBM cloud and display in devicerecent events

Wowki link: <https://wokwi.com/projects/346389445244617300>

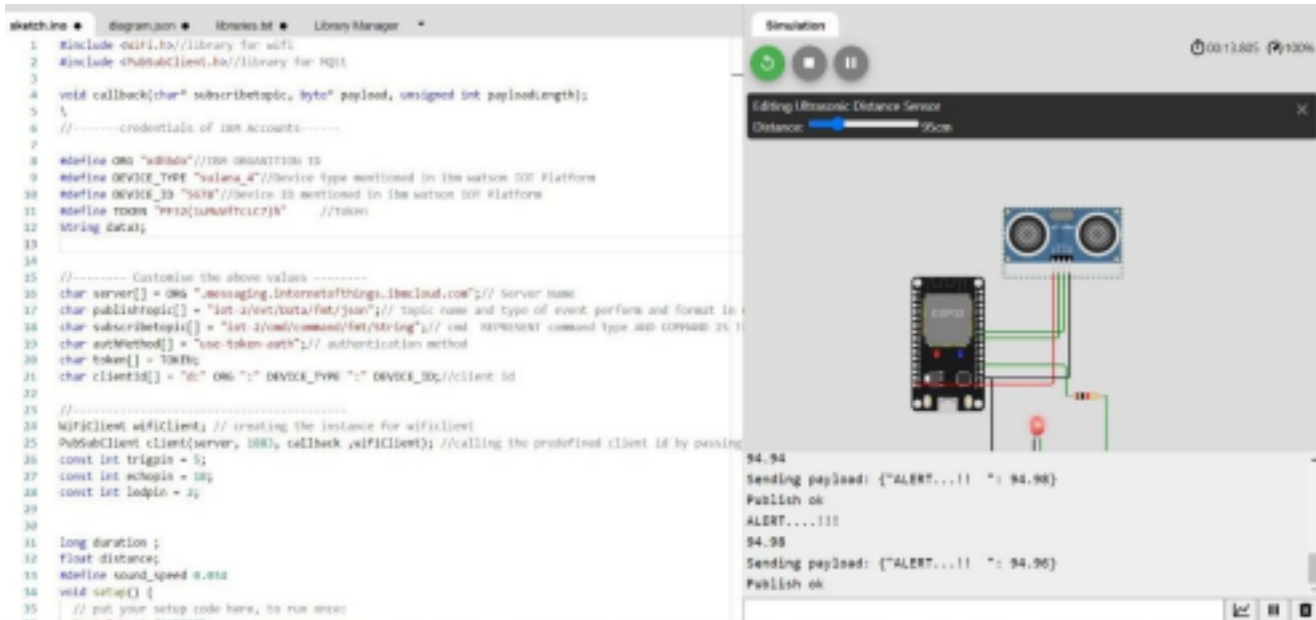

Step 1 : Add new device in IBM cloud

The screenshot displays the 'Browse Devices' interface in the IBM Cloud IoT Platform. The page includes a sidebar with navigation icons and a top navigation bar with tabs for 'Browse', 'Action', 'Device Types', and 'Interfaces'. A blue 'Add Device' button is located in the top right corner. Below the navigation bar, the 'Browse Devices' section features a search bar and a 'Diagnose' button. A descriptive text states: 'This table shows a summary of all devices that have been added. It can be filtered, organized, and searched on using different criteria. To get started, you can add devices by using the Add Device button, or by using API.' Below this is a table of devices with the following data:

Device ID	Status	Device Type	Class ID	Date Added	Descriptive Location
1234	Disconnected	abcd	Device	Oct 12, 2022 6:29 PM	
123456	Disconnected	xxxx	Device	Oct 12, 2022 6:43 PM	
5678	Connected	ultrason_4	Device	Oct 24, 2022 12:08 PM	

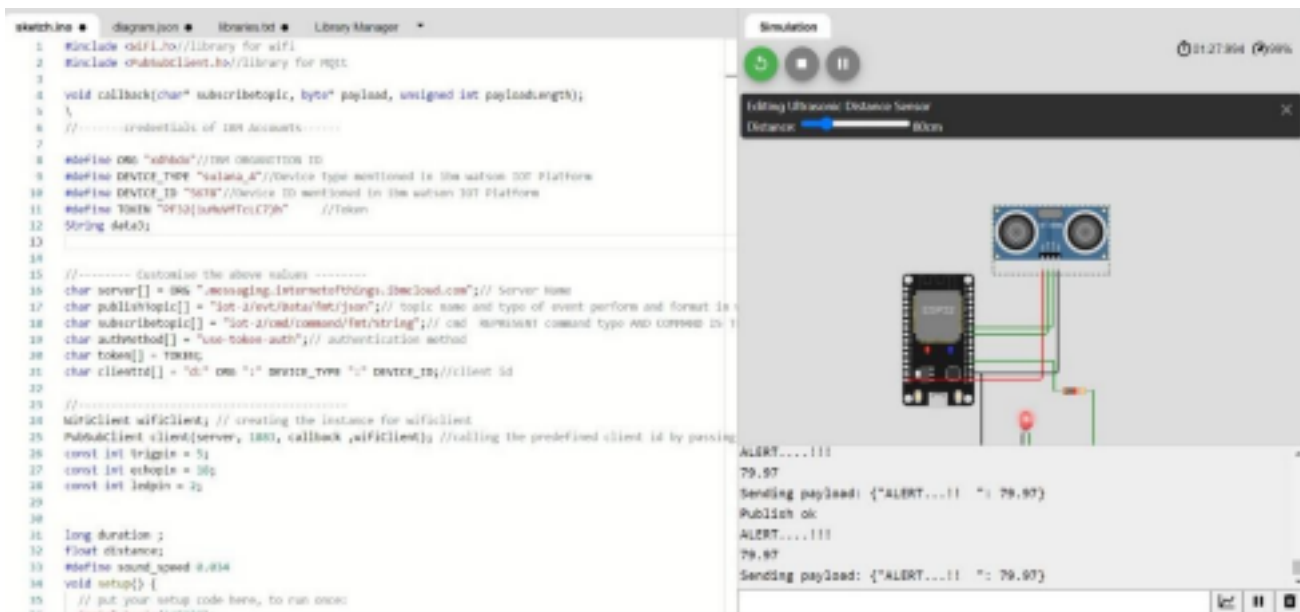

At the bottom of the table, there is a pagination bar showing 'Items per page: 50' and '1-3 of 3 items'. The 'Device Simulator' toggle is also visible in the top right corner of the table area.

Step 2 : Complete the Circuit and run the program

OUTPUT IN WOWKI

a) when the distance is below 100 cms

Edit with WPS Office

b) when the distance is above 100 cms ,(no alert message is displayed here for 202 cm)

```

publishTopic[] = "iot-2/evt/Data/fmt/json";// topic name and type of event perform and format
in which data to be send
char subscribetopic[] = "iot-2/cmd/command/fmt/String";// cmd REPRESENT commandtype
AND COMMAND IS TEST OF FORMAT STRING
char authMethod[] = "use-token-auth";// authentication methodchar
token[] = TOKEN;
char clientId[] = "d:" ORG ":" DEVICE_TYPE ":" DEVICE_ID;//client id

//
WiFiClient wifiClient; // creating the instance for wificlient
PubSubClient client(server, 1883, callback ,wifiClient); //calling the predefined client id by
passing parameter like server id,portand wificredential
